

Advantage Cloud™

Say goodbye to complexity with Compulink's comprehensive and State-of-the-Art hosted solution. Built on Microsoft's leading enterprise Cloud OS technology and hosted on the most reliable infrastructure available today.

With **Advantage Cloud™** service, you get instant access to all the same great features you've come to expect from Advantage software, without the need to set up or maintain your own network, software or hardware. Convenient, cost-effective and secure, our Cloud service allows you to be up and running quickly and realize a positive impact on your business in a fraction of the time.

Powered by the AWS Cloud

Advantage Cloud™ is hosted on Amazon Cloud data center to simplify client access and maximize security and reliability. Compulink's Cloud is hosted alongside companies such as Netflix, Adobe, Nokia, General Electric, CDC, Pfizer, Bristol-Myers Squibb, USDA and Universities such as NYU Medical School, Seton Hall, NASDAQ and PBS.

Anytime, anywhere access

Advantage clients have the ability to access their patient data anytime and anywhere via the Internet.

Hardware Failure

Compulink Cloud services are housed on virtual servers. Virtual servers can move quickly between physical machines with any sign of failure. Our highly trained Cloud experts can quickly manage disruptions and minimize the time clients typically lose when their own on-premise servers crash.

Security and Expertise

Cloud services may be more secure than systems that are managed in-house. Few companies have security and IT experts on staff, but Cloud services could have dozens of people who work to keep the data flowing and accessible. There is no physical equipment that can be compromised or need repairs.

AWS Data Centers

The state of the art Data Centers are employing backup generators, redundant power and are manned 24/7 365 by qualified experts and armed security guards. Amazon cloud hosting is considered the market leader in cloud hosting solutions and is one of the first to offer such services. Amazon has the widest breadths of cloud services, which include storage, databases, compute, applications, networking, load balancers and application developer platforms. Compulink has deployed many of these solutions to implement **Advantage Cloud™**.

Lower IT and administrative costs

Using **Advantage Cloud™**, Compulink can deliver compute, storage and database services, which allow our clients to quickly secure the necessary resources to deploy their environment and without significant capital investment. There is no hardware cost or concerns since all servers are virtual. New servers can be added as needed. **Advantage Cloud™** scalable architecture ensures problem-free growth regardless of your organization's size.

No need for complex data backup plans and maintenance

As organizations cope with the growing amount of digital information being generated every day, they face a daunting truth: **without their data, they have no business**. State-of-the-art managed backup technologies have been implemented at our AWS data centers to provide maximum protection and redundancy.

HIPAA Compliant

AWS offers a high level of security and supports existing AWS security controls and certifications such as HIPAA, SOC 1/SSAE 16/ISAE 3402 (formerly SAS70), SOC 2, SOC 3, PCI DSS Level 1, ISO 27001, FedRAMP, DIACAP and FISMA, ITAR, FIPS 140-2 compliant end points, CSA, MPAA.

Advantage Solutions

An AMI-Partners study commissioned by Microsoft reveals Small and Medium Businesses are losing over \$24 billion in productivity every year. This is due to non-technical employees having to manage a company's IT solutions. From **Turnkey Systems, Managed IT Services** to **Advantage Cloud™**, Compulink is committed to provide highly advanced solutions that best fit our client's needs.
